

Ansible 3

1. Create vars directory in your project folder , use group_vars and host_vars example playbook

2. Create a playbook named playbook.yml. Create a play named "Deploy and start Apache HTTPD service", target the host group webserver as the managed hosts, and define the following variables in its vars_files section:

web_pkg: httpd

frwl_pkg: firewalld

web_svc: httpd

frwl_svc: firewalld

rule: http

Install apache , ensure firewalld and apache service is started and enabled , and add apache service to firewall

3. Use extra variables in command line
